

Readiness effect on change in debt/GDP through t+1

 $m(\theta; c)$ from the full-control kink model; pointwise 95% CI; P1-P99 support

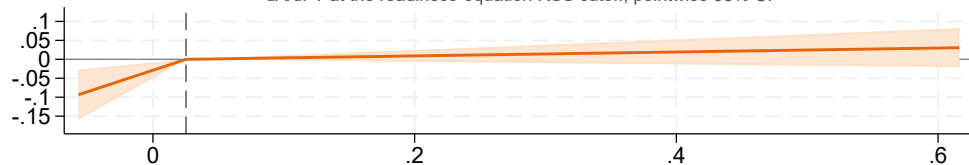

Point estimate

95% CI

Empirical adaptation index θ^A

Positive values imply a larger debt/GDP increase; dashed line: debt-equation RSS cutoff.

Fiscal-pressure effect on readiness at t+0

 dA/dFT at the readiness-equation RSS cutoff; pointwise 95% CI

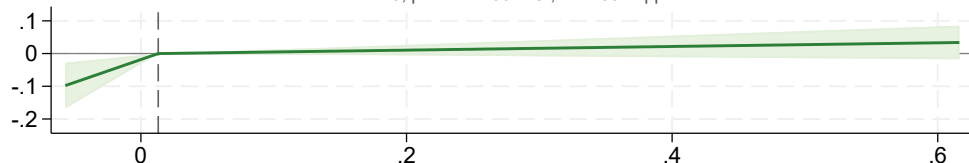

Point estimate

95% CI

Empirical adaptation index θ^A

Positive values imply higher readiness; dashed line: readiness-equation RSS cutoff.

Readiness at debt-equation cutoff

 A at t+0; pointwise 95% CI; P1-P99 support

Point estimate

95% CI

Empirical adaptation index θ^A

Dashed line: cutoff minimizing RSS in the full-control debt equation.
